

## Required Readings

- Read "[An Introduction to jQuery](#)"
- Complete the six modules of the [jQuery Tutorial](#) on SoloLearn where you already have an account. You will need to report your completion by uploading your certificate to the [assignment](#) drop-box.
- Watch  "[Work with the DOM with jQuery](#)" This tutorial is directly tied to the work you will do in one of your assignments. You will need to follow along with the [tutorial files](#) loaded and ready on your computer within its own folder within your local site.

**Note:** The tutorial video may use an older version of the jQuery library. The scripts will also reference embedded scripts on the page in order to help with the presentation of the material. We should conform to the web development model and reference an external source and place the reference to the .js file at the end of the page to ensure all HTML elements have loaded, e.g., ... `<script src="scripts/jqscript.js"></script></body></html>`
